

**IDOT PTB 162, Item 27 ■ FAU 6757 (US 150)  
Intersection of US 150 (Jackson St.) and Main St.  
Morton, Illinois**

*Subconsultant Civil Engineering and Surveying Firm*

This project included civil engineering and surveying services. Millennia Professional Services (MPS) provided surveying services including topographic and right-of-way surveys and utility coordination, coordinating with Midwest Engineering Associates.

The intersection of North Main Street and Jackson Street (US Route 150) has been a 4-way stop for decades. More recent congestion and alignment issues had prompted for a more traffic-friendly alignment through this busy intersection. MPS supported the Phase I and Phase II efforts with land surveying and title research services.

**Surveying Services Provided:**

- Determining existing control and establishing new site control.
- Completing plat and deed research, field monument recon and traversing.
- Completing property boundary calculations to determine the right-of-way lines for North Main Street and US Route 150 (Jackson Street)
- Prepare Right-of-Way Plats and Permanent/Temporary Easement Plats (approximately 28 plats in total) for land and easement acquisition.

**Clients:**

Illinois Department of Transportation  
District 4  
401 Main Street  
Peoria, IL 61602-1111

Midwest Engineering Associates, Inc.  
140 E. Washington Street
